

Rittal Has More To Offer.

Automated products can increase the efficiency of your modification operations.

With the purchase of the Perforex BC Machine, your business will take a giant leap forward in automating your modification operations.

As your company evolves with machining automation, Rittal is there to deliver a full suite of products to enhance process efficiency. Find out more below.

Laser Cutting Center

The 3D laser technology in the Perforex LC is ideally suited for machining stainless steel and sheet steel; as well as powder-coated metals such as Rittal enclosure doors, side panels and complete enclosures.

Semi-Automatic Wire Processing

The compact Wire terminal 24 or 36 fully automated wire processing machine ensures efficient, cost-effective wire processing. Up to 36 different wires in diameters ranging from 0.5 mm² to 2.5 mm² (AWG 20 - 14) may be processed fully automatically without retooling.

Hand Tools

Rittal high-quality hand tools are designed specifically for the modification and assembly tasks. Their rugged construction and ergonomic design ensure they will be a valuable part of your toolbox for years to come.

Assembly Frames

Rittal Assembly Frames are mobile, tiltable and (depending on the version) height adjustable assembly frames for use during the automation and rationalization of processes throughout every stage of machining, assembly, wiring and testing of enclosures.

To ensure your machine runs at peak performance, a comprehensive maintenance program is available. For your nearest distributor call 800-477-4000, email customerservice@rittal.us, or visit www.rittal.us.
